

Tip of the Month – March 2025

Hygiene and work routine.

Shaving or burning udder hair, trimming tails to keep them cleaner, every farmer who works with milking robots knows that.

Clean camera glass ditto.

Dry boxes and clean udders / cows, it is good for hygiene but also for the capacity of a milking robot.

The V300 attaches so well that we are becoming a bit more relaxed about this.

And now that field work is starting again, it is important to remain strict about this!

Isn't it remarkable that one farmer with the same production the milking robot uses half a minute less per milking session...?!?

And that means room for 10 – 15 extra milkings per VMS per day!
