

Cooperation with DeLaval Dealers.

For DeLaval Dealers.

Due to the success of the VMS V300 and VMS V310, dealers and technicians often find it difficult to find the time to spend with dairy farmers who have just started using the software or who still have questions about the DelPro management program.

The DelPro management program is a great program with many features and has already received several updates. The latest updates, in particular, incorporate not only the ideas of programmers but also many from technicians and practicing farmers!

Not only new farmers but also farmers who have been working with DelPro for a longer period of time appear not to be taking advantage of the newer or other important options due to their fixed rhythm and usage.

In such cases, it's a good idea to have a fresh pair of eyes, with knowledge of cows and DelPro, take a look at the farm.
